

# Metropolis MC — the 9 configurations that beat the uncoupled reference

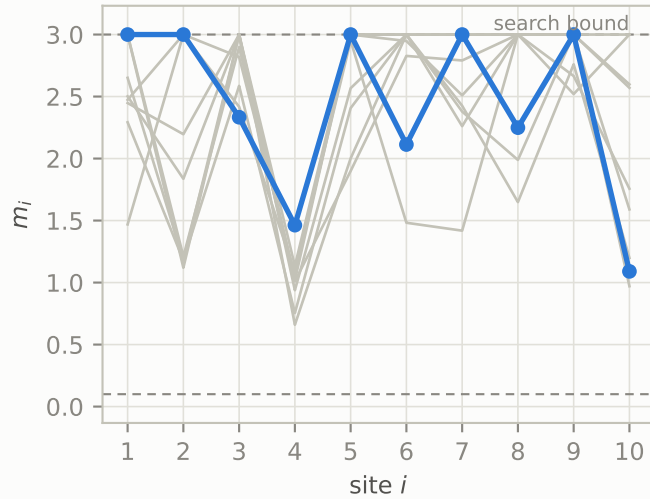

v3 extended run (20000 steps): 9 of 100 refined candidates reach normalized sensitivity  $> 1$ ; best = 1.095 at relative spread 3.40.

Top row: parameters of all 9. Bottom row: normal-mode states of the best one.

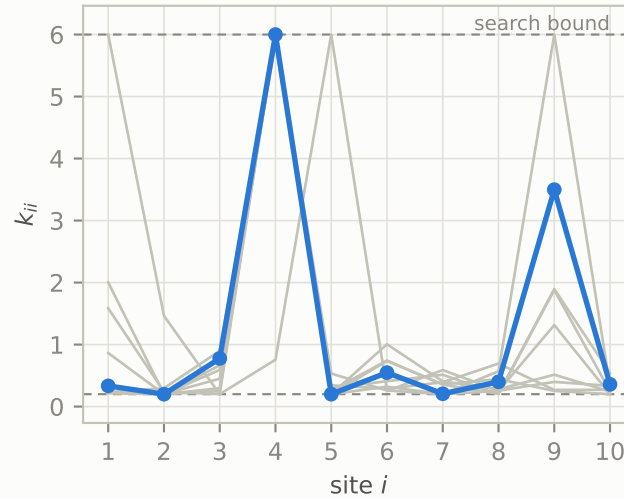

Caution: the nominal winner FAILS the swept-interference validation (swept-normalized 0.891) — see monte\_carlo.md Run 3.

— best ( $\tilde{S} = 1.095$ )  
— other 8 with  $\tilde{S} > 1$
