

Configurations that beat the universal uncoupled bound (27 found)

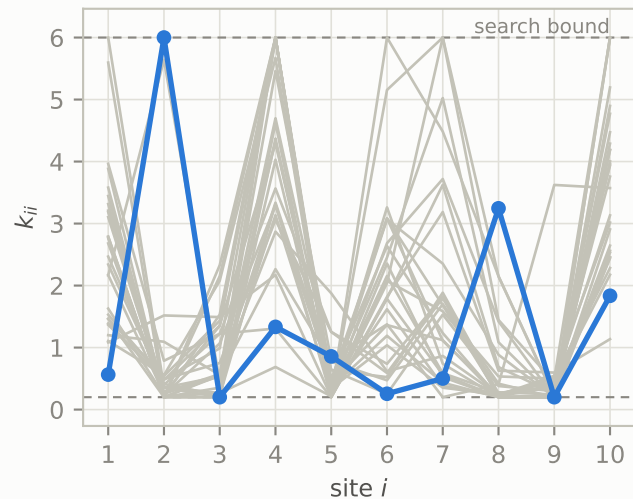

v7 constrained run (20000 steps, min gap 3 linewidths): 27 of 100 refined candidates score $S/S_{unc} > 1$; highlighted design = 1.096.
Top row: parameters. Bottom row: normal-mode states of the highlighted design.

All designs satisfy the 3-linewidth resolvability constraint; champion swept-metric score is 1.018.
